

## Engineering glass

Our range of technical glasses can be used in practically all fields and industries. They can be supplied in any desired shape in compliance with customer specifications.

One of our specialities is gauges in all dimensions and thicknesses (DIN standards), for various applications such as equipments and machinery.

## Ceramic glass

We offer a wide variety of machined glass ceramic products (Macor®), used as load-bearing and low-abrasion material in moving devices and machinery.

Macor® is non-wetting, has no porosity and, in contrast to ductile materials, does not deform. Moreover, it is an outstanding insulator at high voltages, various frequencies and high temperatures.
